I 3 R 2

NORTHWESTERN UNIVERSITY, 1884.

DEAR SIR:

The following catalogue is a collection of the phaenogamous plants—with the exception of the orders Juncaceae, Cyperaceae and Gramineae—of Evanston and vicinity, containing the names of seven hundred and six specimens, the greater part of which were found in Evanston itself, all being obtained within a radius of ten miles. The few plants which were not collected by myself are credited to those who did so—Babcock or Shipman, as the case may be; all cultivated plants are so designated, and the orders, genera and species, follow according to Gray's Manual.

Trusting that you may find this catalogue nearly complete,

I remain, yours, very truly,

CHARLES S. RADDIN, '84.

DR. OLIVER MARCY,
Prof. of Natural History, and
Curator of Museum.
